Annual Bull Sale

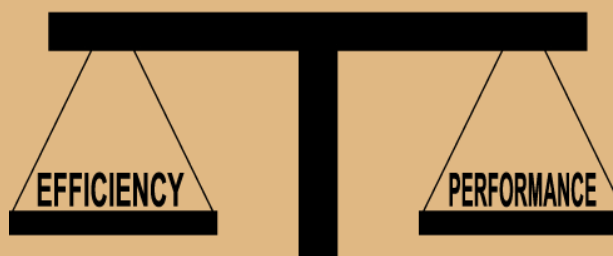

April 18, 2020

1 p.m. PDT

Crater Ranch Headquarters

Winslow, Arizona

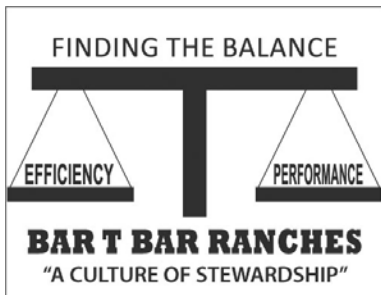

FINDING THE BALANCE

BAR T BAR RANCHES

"A CULTURE OF STEWARDSHIP"

Combining COWBOY LOGIC and COMPREHENSIVE TESTING

Welcome Friends,

We are proud to offer this set of bulls for your review. The Genetic Potential they have to add value to their calves and profit to your operation is accountable and real. Many of the bulls represent the second generation of Feed Efficiency Tested Hybrid Genetics. These bulls are all DNA tested to increase the accuracy of their EPDs to insure the fastest selection process to reach your breeding goals.

The beef industry has transitioned to a Choice or better product. If you walk through the aisles of Costco, Walmart, or even Whole Foods, Choice or better products dominate the meat case. There is no better time to add this set of bulls to your program. The average EPD for the entire offering falls in the top 20% of the breed for marbling and average daily gain, RFI and Efficiency Profit Index.

The Proof:

The last 2 years we have harvested over 1500 head:

- 94% Choice or better
- 11% cheaper cost of gain than yard average
- 20% higher average daily gain than yard average

The Factory:

The most proven range cowherd in the Southwest. Every cow has a calf in 45 days or she is culled to the commercial herd. Over half the cowherd is a Dam of Merit, Dam of Distinction, or a daughter of one.

Good footed bulls that will produce females that have Genetics that Matter, live calves, rebreed, and stay in the herd year after year.

The ultra sound data, scrotal and second round RFI will be on our website 1st week of April and videos on DV Auction. Get us your PAP testing list by April 10th .

Join us Friday the 17th to look through the bulls. That afternoon, at 3pm, Dean Fish, Santa Fe Ranch Foundation manager, provides insight into problem solving research developed to help fellow beef producers during a Stockmanship and Stewardship demonstration.

Friday evening at 5pm join us for the pre sale social at Meteor Crater. Browse the Crater at sunset with a Cocktail and heavy hors d'oeuvres. Associate Director of the Public Lands Council, Tanner Beymer provides entertainment and humor to the evening through experiences gained during lobbying efforts, western political campaigns, auctioneering and the cattle industry.

We want to thank Farm Credit West for providing the Four Corners Beef Steak lunch prepared by Bopper Cannon on Sale Day. We sincerely appreciate the opportunity to serve you and we are committed to help improve your profitability and sustainability in the cattle business.

Please let us know how we can assist.

Sincerely,

All of us at Bar T Bar Ranch

Bar T Bar Ranch Annual Bull Sale * April 18, 2020

1 pm PDT * Bar T Bar Crater Ranch Headquarters * Winslow, AZ

Sale Staff:

Justin Stout, Auctioneer...913-645-5136
Matt Caldwell, DV Auctions & The Stock Exchange913-755-1105
Matt Macfarlane, California Cattleman.....916-803-3113

La Posada Motel 928-289-4366
Best Western Motel 928-289-2960

FRIDAY:

- * Bull viewing all day
- * Lunch at the Bunkhouse
- * 3:00 Dean Fish presents live animal demo, "Stockmanship & Stewardship"
- * 5:00 Evening Social at Meteor Crater, Hors d'oeuvres & Humor with Tanner Beymer, Associate Director Public Lands Council

SATURDAY:

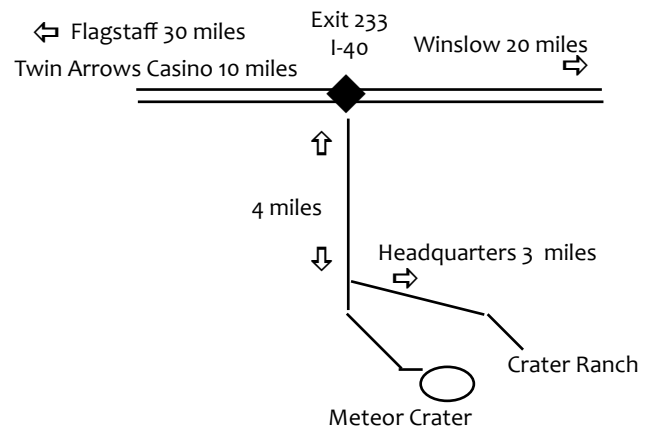

- * 12:00 '4-Corners Beef' pre-sale lunch provided by Farm Credit West and prepared by Bopper Cannon Family
- * 1:00 P.M Sale

(Due to the COVID-19 exposure concerns, some of these events are subject to being cancelled or modified. Please call ahead to verify if you are planning on attending)

PAP TESTS: Please note that we need a list of your prospective bulls that need a pap test by April 1st!

Health Tests: **PLEASE NOTE!** Bulls going to **New Mexico, Utah, & Nevada CANNOT** LEAVE Sale day!! Trich test will be done the day after the sale and the bulls will be delivered immediately after that - as soon as the buyer is ready!

MAP TO SALE SITE:

The Supplement Sheet & Videos will be available on April 1st at the website with ultrasound, frame scores, scrotals and additional RFI.

Bar T Bar Ranch Annual Bull Sale * April 18, 2020

1 pm PDT * Bar T Bar Crater Ranch Headquarters * Winslow, AZ

Bull Tags: Each bull is wearing a colored breed tag. Breed tags correspond to the tattoo numbers and are colored as follows:

Yellow= Angus

Yellow w/ underline= 75% Angus and/or Red Angus

Yellow w/ star= 69-74% Angus and/or Red Angus

Yellow w/ underline & + = 80-99% Angus and/or Red Angus or 50AN/50AR

Blue = Brangus X Balancer

Blue w/ underline= 25% Brangus X Balancer

Blue w/ underline & star= 13% Brangus X Balancer

Blue w/ underline & + = 25% Brangus X 13% Beefmaster X Balancer

Green= Balancer

Green w/ underline= 69-86% Gelbvieh

Orange= 87-100% Gelbvieh

Red = Red Angus

Red w/ underline = Hybrid (anything that is less than 25% GV and 25% AN/AR)

Purple= Beefmaster X Balancer

Purple w/ underline= 25% Beefmaster X Balancer

Purple w/ underline & star= 13% Beefmaster X Balancer

White = Simmental X Balancer

White w/ underline = 25% Simmental X Balancer

White w/ underline & star = 13% Simmental X Balancer

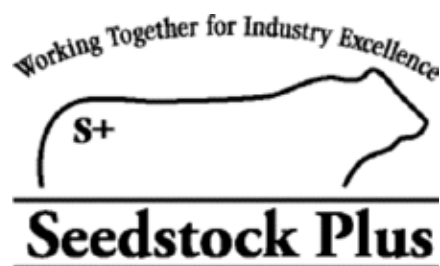

Bull Videos: Each bull will be video'd by DV Auction staff and the videos will be available at the DV Auction website or thru the links at www.bartbar.com and www.seedstockplus.com. As more data becomes available when the bulls finish the RFI test and are ultra-sounded and measured, that information will be presented with the video. This should be around April 1. Keep checking back at the videos, the data will be there as soon as it is compiled!

DVAuction Broadcasting
Real-time Auctions

VISIT www.dvauction.com AND REGISTER TO BID AT LEAST 24 HOURS PRIOR TO THE SALE! The sale will be conducted with a live auction, however internet users and bidders will see the video of the bull taken prior to the sale, along with his pedigree and data from the catalog and supplement sheet. Bidding is real time so high speed internet access is important! Call 402-316-5460 if you have questions or 402-474-5557 for technical support. Or email support@dvauction.com. Remember! You must be registered in advance to bid!

About Seedstock Plus

When we initiated Seedstock Plus 18 years ago, it was built on a few core principles. These are:

- Quality in volume numbers
- Complete and extensive data: the complete package (pasture, feedlot and carcass)
- A commitment to crossbreeding
- Sound development of bulls in a competitive environment
- The highest level of culling
- Marketing with integrity
- Industry-leading customer service and doing more for our customers after the sale.

We are never satisfied and strive to do better; however, what we have accomplished to date implementing these core principles is gratifying. The customers' response to the program that Seedstock Plus breeders have built enabled us to raise, develop, market and stand behind a better product year after year. For this we thank our repeat and new customers.

For those unaware of the Seedstock Plus program, we are a member-based cooperative of 50+ family seedstock producers in 15 states. While maintaining their individual identity, these breeders make a very strong commitment to develop and market their bulls under the umbrella of Seedstock Plus. Collectively, Seedstock Plus markets over 1000 bulls a year in Missouri, Arkansas & Arizona. We also market registered females, hundreds of commercial bred females and help market thousands of feeder cattle for our customers on an annual basis. Seedstock Plus is a significant full service genetics provider.

The members participating in this sale are representative of the outstanding breeders involved in Seedstock Plus. The commitment these breeders exhibit to their customers and to the beef industry is a testament to them and the overall Seedstock Plus program. We all look forward to earning your new and repeat business.

Seedstock Plus Customer Service Programs

Guaranteed Sight-Unseen Purchases

Free Delivery on bulls to
adjoining states at central locations
or to your ranch in Arizona.
A \$75 Discount if picked up sale day

Bull Warranty Program

Bulls are guaranteed for Fertility,
Structure and Disposition. For an
additional 5% of purchase price, bull
can be warrantied for injury and
death for 6 months.

Marketing Assistance Program

- Feeder Calves
- Replacement Females
- Bred Heifers, Cows and Pairs

If you need additional information on a particular program, call us at the Seedstock Plus office.

Bull Warranty Program Insurance for your bull!

Several years ago, Seedstock Plus instituted an insurance program for new bull purchases in an effort to protect our customers from a catastrophic loss if something should happen to a bull within the first breeding season. This program covers any and all possible things that a bull can do to himself in the first six months of ownership. The warranty costs 5% of the purchase price and should you have to use it, we try to either bring you a comparable replacement or find a suitable loaner bull to get the cows bred if you are still in the midst of breeding season. If something happens to him towards the end of the season, we still cover that but often will either take the bull back and issue a credit towards your next purchase or have you ship the bull, keep the salvage funds and issue a credit for the balance. Any way you look at it - we get you back even! We've warrantied bulls that have been hit by lightning, hit by trains, drowned, broken various body parts or been injured in such a way that he won't ever be sound to breed cows again.

There are very few affordable commercial insurance policies that will cover a bull for loss of use. Farm policies will cover 'acts of God' (so do we!) but again, an injury is just your tough luck. The 5% of purchase price cost is a small price if something happens to your bull within that first 6 months!

We appreciate the fact that you've put your trust in us to present you with a bull that has a good disposition, good feet and legs and will breed cows - we feel those things should be 'on us' and you don't need insurance if you have a problem in one of these areas - you just need to let us know and we'll take care of it. We try to catch every possible problem prior to the sale but things happen and bulls are bulls.... But if your bull gets injured or dies, he needs to be insured! Take a good look at what the warranty can offer you and be sure to tell us at the settlement table that you want to insure your bull!

2019 Bar T Bar Ranch
Bull Sale Pictures

Our Customers Say It For Us!

Our operations are in the Mexican State of Sonora. Located in the high Chihuahuan desert, below the eastern portion of Arizona and the western boot heel of New Mexico. We experience very cold winters and extremely high temperatures and humidity during our Monsoon (July to Sept).

We started using Bar T Bar genetics in the early 1990's trying to improve the reproductive level of our mostly Brangus cowherds. We keep individual records on all our cows and used calving interval as one of our main selection criteria. Our goals were to develop a cow herd with a breeding season during our Monsoon. We expanded the season to calve early as we developed a market for our bull calves as commercial bulls for the area. We turn out bulls April 1st and take them out around Sept 1st. We started the second operation in 2003 using regional heifer calves from mostly Black Brangus origin. Balancer bulls were used from the start, only red bulls after 2007.

We run our cow herd as one unit with multiple sires, the replacements are run separately. We calve in the canyons of the Sierra Madre and migrate up to the summer high plains grasslands in the summer.

We wean and palpate in November and the dry pregnant cows go back to the canyons for the winter.

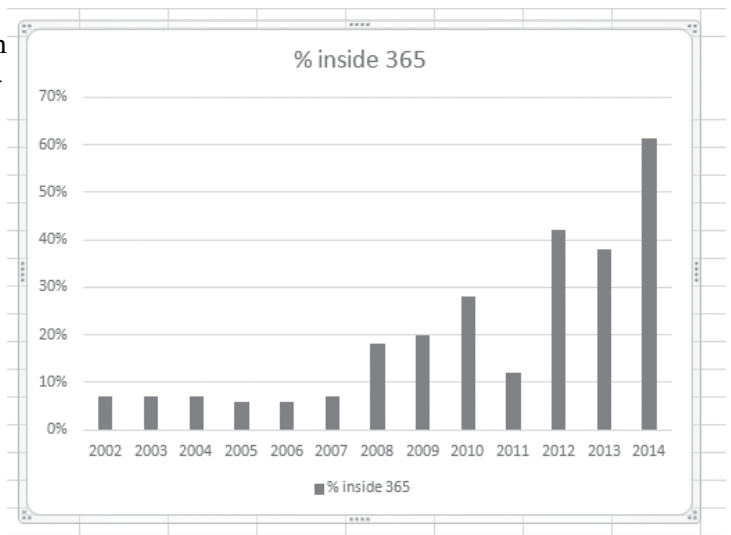

The percent of cows calving inside 365 day interval stayed pretty flat, around 7.5% of the herd until the daughters of the Balancer bulls came into production. In 2017 I sent the data to Bar T Bar and they created a graph that illustrates the progress made in a very clear fashion. In the horizontal we have the year of birth of the cow and in the vertical, the percent of those cows calving inside 365 days interval between calves. The progress was very dramatic and today we have a 87.5% weaning rate, this reproductive performance is unheard of in our state.

We use Igenity's Silver Profile plus parentage and it allows us to analyze many traits. It lets us see which bulls are siring the most calves. Which bulls work better in the heat and humidity of the Monsoon and which do better in the cool of the spring. It also shows us where we are weak and where we are strong and help with the selection of what traits we need to increase selection pressure on.

In 2015 we started using Bar T Bar Southern Balancers in addition to our traditional Balancers, as we have customers in the lower desert that need a bull with more heat tolerance. We are extremely happy with the results. They are very active in the Monsoon, hold condition well and sire calves with excellent growth, marbling and excel in RF!. The temperament is excellent and the females are outstanding cows.

Slowly but surely we are showing our Sonoran cattlemen that not all cows are created equal and that fertility does not enter 100% through the mouth. We are trying to optimize our cowherd not maximize it.

Ray Rodriguez
Sonora, Mexico

In 1999 we purchased our first Red Angus bull from -T- at the Prescott Cattleman's wkend sale. Nineteen years later, our herd is solely from -T- AR Balancer bulls. These bulls handle this malpai terrain without a problem and stay in good condition. We keep our own replacement heifers, therefore taking advantage of the best genetics. Calves from these heifers grow up to sell uniformly with the main bunch. We appreciate the years of help from Bob and Judy in helping us select bulls that continue to enhance our herd.

Trudy Birkemeyer
Dugas Ranch, Mayer, AZ

Diamond G Ranch is a family owned and operated ranch located at the base of Mount Taylor, near Chief Rancho, New Mexico. It is approximately 60 miles west of Albuquerque and is currently being managed by the youngest of the brothers Chris Gutierrez. The ranch was purchased by our parents in 1964, with the intent of keeping their twelve kids busy, and busy it has kept us. My oldest brother tells the story of the first group of cattle purchased, being a group of Hereford cows that could escape any kind of fencing (this was the day of the 4 ft rail fence). Over the years we have had many different breeds of cattle, with varying degrees of success. Our dad was not much of a “cattleman,” but was an avid steward of the range and other natural resources. He and his eight sons built miles of fence, developed springs, laid miles of pipe, designed dirt tanks, and built berms and such for erosion control. Over the years, forage production on the ranch has improved significantly, as has the quality of our cattle. For 20 plus years, we have used the Bar T Bar Ranch genetics and have had great success. It is safe to say that our females are very fertile, productive animals, that will excel in any type of environment! We have maintained a consistent breeding percentage averaging approximately 90% or better. The cattle are efficient grazers and hold their condition well, the weaning weights have averaged from 550-600 lbs. the past few years and the cattle have been successful in every aspect.

Diamond G Ranch,
The Gutierrez Family,
Grants, New Mexico

We have been using Bar T Bar bulls since 2005. We love their ability to get out and get the cows bred without falling apart in our high desert country. The female replacement heifers we keep are fertile, hardy and make ideal mothers. The data Bar T Bar Ranch collects on the bulls provides us the chance to select the traits that improve our operations year after year.

Danny Major, Manager of Perkins Ranch and
Major Cattle Company, Chino Valley, Arizona.

Cathy and I have been running Bar-t-Bar bulls for about 15 years now and we couldn't be more satisfied with the results. We summer on high Nevada desert with most of our range from 7000 to 9000 feet. These bulls do their work in spite of the conditions. We have begun introducing the “Southern Balancers” to our herd and the calves are performing very well. Cathy especially likes the disposition of the Bar-t-Bar bulls and I like their feet. These bulls are an integral part of our program and we're planning to return to Winslow for the foreseeable future. Bob and Judy are great to work with!

Jack and Cathy Neal
Moorman Ranch,
Ely, Nevada

Our Customers Say It For Us!

Oak Tree Land and Cattle Company LLC

We have a relatively small ranch and mostly on USFS land. The Balancer Cattle (bulls and bred heifers) adapt quickly and are very easy to handle. Their disposition is important to us as we do most of the vaccinating and processing ourselves.

Every year we buy a yearling bull from Bar T Bar at their production sale in April. We turn him out with the 15 to 18 heifers on May 1st. They get the heifers bred in 45 days, no problem. Of course the Bar T Bar Bulls produce heavy weaning calves that weigh above average for our area.

The most important reason to buy Bar T Bar Bulls is that Bob and Judy are truly dedicated to producing high performing, adapt-

able and docile cattle. They know the cattle business from seed stock, cow calf, feedlot and harvesting through marketing the beef they produce. For Oak Tree Land & Cattle – Bar T Bar and Balancer Bulls are the way to go.

Tim & Barbara Jackson

The Diamond A Ranch has used Bar T Bar bulls for several years. We have been very pleased with the bulls we have purchased for several reasons. Bar T Bar bulls are not over fed but have plenty of condition to be able to go right to work and continue working. We have had no issue of calving problems. The calves grow fast, and the quality is outstanding and consistent. Their feedlot performance had been outstanding also. They grade exceptionally well. Even as Bar T Bar works to continually improve their bulls, they have managed to maintain a moderate sized animal. All these factors fit into the Diamond A Ranch program.

Gary Wilson
General Manager
Diamond A Ranch

We have been purchasing Bar T Bar bulls for over 15 years and have been really happy with the results.

For our mature cow herd selecting bulls with good maternal traits, milk production and higher weaning weights has moved us to selling more pounds, dollars per acre, thus keeping the ranch profitable through the ups and downs of markets and weather.

We have purchased bulls with Easy Calving EPDs and light birth weights for our first calf heifers and have minimalized calving troubles. These calves are born small but quickly catch up and sell with the calves from our mature cows. We develop our own replacement heifers and as 1st time mothers the maternal traits invested in the cow herd pay off. These 2 year old cows take right to being mama's.

We will continue to purchase from Bar T Bar and appreciate the help Bob and Judy give us to find the genetics and bulls we are looking for each year.

Kit Metzger
Flying M Ranch, Flagstaff, AZ

Efficiency EPD Information

In 2012 the American Gelbvieh Association voted to develop research EPDS for Residual Feed Intake utilizing Dry Matter Intake , Average Daily Gain , and Weaning to Yearling Gain. With over 7000 individual animal feed intakes and over 1 million animals in the data base, the Genetic Evaluation creates accurate EPDs to select for efficiency. The Efficiency Profit Index uses the above EPDs to give a dollar value to efficiency while maintaining an acceptable level of gain. These EPDs are in full use today and are the best numbers to use in selection.

There are a lot of numbers floating around to describe efficiency: “Feed to Gain” or “RFI Rank” to name a couple. An individual animal’s record can be biased by health, weather, pecking order in the pen etc.

At Bar T Bar we believe that the genetic relationships of an animal and how they all perform in a Genetic Evaluation, is the only way to remove biases and make Genetic Progress through selection! Utilize these EPDS in your selection to have the most impact on your Genetic Progress and the rate of change.

RFI EPD – Residual Feed Intake EPD - Residual Feed Intake (RFI) is defined as the difference between an animal’s actual feed intake and its predicted daily intake based on growth rate and body size. Animals with more positive RFI values are deemed more “inefficient” because they consume more than expected while animals with a more negative RFI EPD value are more “efficient” because they consumed less than expected. RFI EPDs are interpreted as illustrated in the following example. Bull A has an RFI EPD of .05 and Bull B has an RFI EPD of -.10, on average, progeny from Bull B can be expected to consume .15 fewer pounds of dry matter per day than similar sized and similar gaining progeny from Bull A.

Efficiency Profit Index (EPI) - An economic selection index developed to aid producers in selecting for more feed efficient cattle that still have acceptable amounts of gain.

Increasing Efficiency on Forage

With the continual increase in mature cow size, the cost of fuel, equipment, and labor, there is merit in increasing range-cattle efficiency. That’s why we began measuring and selecting for feed efficiency through Residual Feed Intake (RFI). If you’re unfamiliar with it, RFI is the difference between how much feed cattle consume and how much they are expected to consume, based on their body weight and level of production.

RFI is moderately heritable, similar in heritability to growth traits at approximately 40%. That means commercial producers should be able to make fairly quick progress in improving herd feed efficiency by using bulls with low RFI. Low RFI numbers mean cattle consume less than expected; high numbers means they consume more than expected.

John Paterson heads up producer education for the National Cattlemen’s Association (NCBA). Before that he was an extension beef cattle specialist at Montana State University. In that capacity he was one of the nation’s leading RFI researchers.

Based on research he conducted, as well as research conducted elsewhere in the U.S., Canada and Australia, he explained, “Our conclusion is that low RFI cattle consume less feed, yet we don’t see any decrease in production.”

“Sixty-five percent of annual cash cow costs are winter feed costs,” said Paterson. “What can we do to reduce that 65%?” His math is straightforward: “If I can save 2 lbs. of feed per cow per day, that’s 60 lbs. per month. Multiply that times four months of winter feeding and that’s 240 lbs. of winter feed saved per cow. That’s more than 24 tons of feed saved across 200 cows.”

For the above example, Paterson is assuming propagation of low RFI in a herd leads to 10% reduction in feed. Data suggests the savings can be higher.

“Worst-case scenario, with RFI-tested bulls you have the opportunity to select bulls that consume less feed and you can see what they gain,” Paterson says. “If I’m considering two bulls similar in other traits, wouldn’t it be nice to know one was knocking down 50 lbs. of feed per day and gaining 3 lbs. per day (feed to gain ratio of 16.6) , while the other one was consuming 25 lbs. of feed and gaining 4 lbs. per day (feed to gain ratio of 6.3)?”

At Seedstock Plus and Bar T Bar Ranch, we look at it like this: If you can keep 10% more cows on the same forage resource, produce 10% more calves for no additional forage cost, all of that goes to the bottom line. Over time, we will produce cattle of equal quality and performance that are more efficient. It’s what the cows make, not just what the calves bring.

* If a cow has 3 calves with a WW ratio of 101 + and less than 380 day calving interval she is designated as a 'Dam of Merit'. A cow meeting the same criteria but with 8 calves is a 'Dam of Distinction'. Bar T Bar Ranch is ranked 1st in the nation for the number of these cows in their herd.

Balancer & Gelbvieh EPD & Igenity Score Definitions

The American Gelbvieh Association transitioned to the BOLT system for EPD calculations in the fall of 2018. The American Angus Association had already been using this system for the past year. There are 12 beef breed Associations in collaboration to form IGS (International Genetic Solutions) which brings a new, streamlined method for incorporating genomic results into the EPDs. This incorporates data and updates EPDs on a weekly basis. In addition, it is now possible to use DNA to analyze traits and enhance the EPD profile - these are called 'Genomic Enhanced EPDs' and all of the bulls have GE-EPDs.

The EPD's included in this catalog are:

Calving Ease (CE) – A number that predicts the average difference in ease with which a sire's calves will be born when he is bred to first calf heifers – higher numbers indicate greater calving-ease.

Birth Weight (BW) Weaning Weight (WW) & Yearling Weight (YW) – All are expressed in pounds, this shows the expected number of pounds a bull or female will add or subtract from their progeny's birthweight, weaning weight and yearling weight respectively.

Milk (MK) - expressed in pounds of weaning weight that a female will add/subtract or that a bull's daughters will have.

TM: Total Maternal - expresses the combination of what a sire transmits to his daughters in the form of genetics for growth and genetics for milking ability. Or that same trait directly applied to a female and expressed in pounds.

Calving Ease Maternal (CEM) - this EPD predicts how well an animal's daughters will calve with a higher number being easier calving.

Heifer pregnancy (HP): Predicts the probability that a bull's daughters will become pregnant as first-calf heifers in a regular breeding season, expressed as a percent. A higher value of this EPD is favorable, meaning that a higher percentage of a sire's daughters get pregnant as first calf heifers compared to other sires in his contemporary group.

30-month pregnancy (Pg30): Predicts the probability that a bull's daughters will become pregnant and calve at three years of age, given that they calved as first-calf heifers. This EPD is expressed as a percent, again, with a higher number being more favorable meaning a higher percentage of a sire's daughters will calve at three years of age, given they calved as first-calf heifers.

Stayability (ST) - Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six years of age.

DOC: is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

\$Cow - Represents the genetic value in dollars of profit of an animal when retains as a replacement female relative to other animals in the herd. A higher number represents more profitable genetics.

Carcass Weight (CW) - expressed in pounds of carcass weight adjusted to a constant fat endpoint.

Ribeye Area (REA) - expressed in square inches of rib eye muscle area adjusted to a constant fat endpoint.

Marbling (MB) - expressed in degrees of marbling score, a determinant of USDA Quality Grade. Value is adjusted to a constant fat endpoint.

Fat (FT): Differences for fat thickness, in inches, for a carcass over the 12th rib, smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

Feedlot Performance Index (FPI): An Economic selection index designed to aid producers in selecting for sires whose progeny will perform in the feedlot and are sold on a grade and yield standpoint.

Average Daily Gain (ADG) - Difference in average daily gain in pounds based on an animal's performance during a feed intake test period.

Dry Matter Intake (DMI) - Represents the average daily dry matter intake per day consumed in pounds. A negative or lesser value is more favorable

RFI EPD (RFI) - Defined as the difference between an animal's actual daily feed intake and its predicted daily intake based on growth rate and body size. negative numbers are more desirable than positive.

Efficiency Profit Index (EPI) - An economic selection index developed to aid producers in selecting for more feed efficient cattle that still have acceptable amounts of gain.

IGENITY PROFILE SCORE DEFINITIONS

Tenderness - The profile score for tenderness represents an animal's genetic potential for tenderness as measured by Warner-Bratzler Shear Force (WBSF) with 10 being the most tender and 1 being the least tender. Lower shear force means more tender beef.

Balancer Avg EPDs: CE: 13 BW: -0.3 WW: 63 YW: 95 MK: 20 TM: 52 CEM: 7 HP: 5 PG30: 1 ST: 15 Doc: 12 \$C: 101.71

Angus EPD Definitions

The American Angus Association transitioned to the BOLT system for EPD calculation in 2017. This brings a new, streamlined method for incorporating genomic results into the EPDs. This incorporates data and updates EPDs on a weekly basis.

Expected Progeny Difference (EPD) : is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus.

Calving Ease Direct (CE) : is expressed as a difference in percentage of un-assisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW) : expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW) : expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight (YW) : expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Maternal Milk (MK) : is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Calving Ease Maternal (CEM) : is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction and the EPD is reported in percentage units.

Docility (Doc), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

Yearling Height EPD (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Cow Energy Value (\$EN) : expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Beef Value (\$B) : an index value expressed in dollars per head, is the expected average difference in future progeny performance for post weaning and carcass value compared to progeny of other sires.

Carcass Weight (CW) : expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE) : expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Marbling (MB) : expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

Dry Matter Intake (DMI) - Represents the average daily dry matter intake per day consumed in pounds. A negative or lesser value is more favorable

Angus Breeder Quarter Circle H Angus

Quarter Circle H Angus was started in 1985 as Quarter Circle H Farm and raised Holstein Springers and alfalfa hay. A strong interest in animal genetics initiated the change from Holsteins to Angus cattle. After spending a little over a year learning Angus genetics, EPDs and traveling around the country looking at a lot of fine Angus cattle and talking to breeders, we finally purchased our foundation heard of 10 females from Mark and Abby Nelson of 5 Star Land and Livestock, Elk Grove CA. in 1996. Since purchasing our foundation herd, we have focused on breeding our females to balanced AI and herd sires that provide genetics to improve calving ease, growth, carcass and efficiency. We feel the bulls offered in this sale reflect those attributes and we are sure they will help you to meet the goals of your operation and herd improvement.

AGRICULTURAL FINANCING

800.285.9810

Celebrating nearly 100 years of service to local agriculture!

Terms and Conditions: The cattle will sell under the Terms and Conditions of the American Gelbvieh Association and the American Angus Association. In the event of default in any part of the Terms and Conditions covering the sale by either the buyer or seller, it shall be the responsibility of the buyer or seller to instigate any action necessary to bring about a fair settlement of any claims arising from the sale and to be responsible for any costs included therein. The sale management assumes no responsibility, legal or otherwise, for the failure of either buyer or seller to fulfill their obligations.

Disclaimer: Although all has been done to make sure this is a safe sale to attend, please do so at your own risk. The owners of Bar T Bar Ranch or any of the Seedstock Plus Partners, employees and the sale management take no responsibility for any accident or loss that you may incur.

**FOUR CORNERS

***"Country Natural Beef
provides a different
business model,"***

says rancher Mark Pratt of
Blackfoot, Idaho.

***"It's intended to be a flat
structure, where all
members have a voice
and a say in the co-op."***

MORE THAN BEEF

Country Natural Beef, participating in the Four Corners states under the Four Corners Beef label, is a unique and true cooperative that links ranchers to ranchers, and ranchers directly to customers. Each and every member of Country Natural Beef is a family that maintains a distinctive and unique ranch. These ranches make up the "cooperative" of Country Natural Beef; bringing together nearly 100 separate families that share the same philosophies. These ranchers are as varied by geographic locations and environments as the breeds of cattle that are suitable to each of these locations. Honoring family is a core value of Country Natural Beef and we work hard to ensure that this way of life will be available to subsequent generations, if they so chose.
