Seedstock Plus North Missouri Bull Sale

Saturday February 22, 2020 * 12 noon

Kingsville Livestock Market, Kingsville, MO

Driving Directions: For those of you with a GPS - the street address of the Kingsville Livestock Auction is: 1630 SW State Route 58, Kingsville, MO 64061

Coming from the east: I-70 to exit 49 - hwy 13 south to Warrensburg. West on hwy 50 to hwy 58. turn south on 58 (which will curve back to the east) go thru Holden. Sale barn will be on south side of hwy 58 before Kingsville.

Coming from the west or Kansas City: The best way to come would be to take hwy 50 to hwy W south to Kingsville - turn east on 58 and sale barn will be on south side of hwy outside of town.

Coming from the south: Take hwy 2 east at Harrisonville. Turn north on hwy T. turn east on hwy 58 and sale barn will be on south side of hwy east of town.

Travel:

Commercial Air Service is available to Kansas City, MO. (about 2 hours north west of sale) .If you need to be picked up at the airport, just let us know in advance!

Accommodations:

Comfort Inn, Warrensburg Station
660-429-4848

Best Western Inn, Warrensburg
660-747-3000

Super 8 Motel, Warrensburg
660-429-2183

Seedstock Plus

Seedstock Plus Customer Service Programs

Guaranteed Sight-Unseen Purchases

Free Delivery on bulls
or \$75 Discount if picked up sale day

Bull Warranty Program

Bulls are guaranteed for Fertility, Structure and Disposition. For an additional 5% of purchase price, bull can be warrantied for injury and death for 6 months.

Marketing Assistance Program

- Feeder Calves
- Replacement Females
- Bred Heifers, Cows and Pairs

If you need additional information on a particular program, call us at the Seedstock Plus office.

Health

Seedstock Plus Bulls have been tested and found negative for PI BVD. We recommend producers purchase only bulls that are negative for Persistent Infected BVD Virus. **Bulls are also tested NEGATIVE for Trichomoniasis.** This is not mandated by every state yet but some states are requiring it and we felt it best to be on top of that. The bulls have been vaccinated and boosted with IBR, BVD, PI-3, BRSV-4, Black-leg & Vibrio Lepto. They have been on a regular de-worming schedule since weaning. All the bulls have passed a breeding soundness exam that includes live semen evaluation, palpation, extention and scrotal measurement. All the necessary health tests have been performed and interstate health papers will be available sale day.

Seedstock Plus North Missouri Bull Sale

February 22, 2020 * 12 noon

Selling: 125 - BLACK Balancer & Gelbvieh 18 Month Old Bulls

About the Bulls:

- Prior to delivery to the test, bulls are sorted and culled at home
- Bulls are brought in to be fed together at a Regional Development Center
- Bulls are grown with their longevity in mind - fed for 3# ADG with high roughage ration
- Bulls are culled again prior to catalog for poor gain, conformation, disposition, etc.
- All bulls have passed a thorough breeding soundness exam prior to the sale
- All bulls are tested Negative for BVD -PI3 & Trichomoniasis
- All bulls have genomically enhanced EPDs and are Sire Verified!
- All Gelbvieh & Balancer bulls are Polled and Coat Color tested.
- The bulls are Guaranteed 'Free' of the currently known Genetic Defects we can test for.
- EPDs update weekly so there will be updated EPDs, Tenderness scores, Ultrasound, frame scores & scrotal measurements available on a supplement sheet early the week of the sale.
- **EPDs ARE CURRENT AS OF 1/14/2020**

We are planning to video each of the bulls on February 10 - 12th - after they have been semen checked and clipped. The videos will be posted during that week and will be available to view by February 17th. If you would like to see a video of a specific bull and have access to high speed internet - you can go to our website OR www.dvauction.com and download the videos by the bull's LOT #.

Internet Bidding:

The sale will be available to watch and bid real time at www.dvauction.com

1. Create an account under the 'create new account' tab.

2. Apply for bidding by clicking 'apply for bidding' in the upper left corner of the screen. AT LEAST 24 HOURS PRIOR TO THE SALE!

3. Tune in to the sale to make your purchases!

Industry Commitment

The bulls included in this offering come from producers who are in the Seedstock business for the long haul. They raise the kind of bulls that produce the type of feeder calves that feed well and grade and yield on the rail. These are the kind of bulls that produce the replacement heifers that make our commercial customers so successful. Feel free to contact any of the members listed below if you have questions.

About The Catalog:

Color possibilities:

Black - known red carrier
Homo Black - known homozygous black
Double Black - bulls have 2 black parents and are pending a re-test of coat color.

Designates an RFI tested bull. This data is available on page 5 in the catalog

Polled Status:
Polled: Single Polled
Scurred
Homo Polled
Double Polled - pending a retest of the polled gene

BREED PERCENTILE RANKING PER EPD														
Breed %	OWNER:													

Breed Make-up on Balancer bulls. Abbreviations include: AN = Black Angus AR = Red Angus GV = Gelbvieh XX = unknown

Expected Progeny Differences 'EPD' Definitions

The American Gelbvieh Association transitioned to the BOLT system for EPD calculations in the fall of 2018. The American Angus Association had already been using this system for the past year. There are 12 beef breed Associations in collaboration to form IGS (International Genetic Solutions) which brings a new, streamlined method for incorporating genomic results into the EPDs. This incorporates data and updates EPDs on a weekly basis. EPD Definitions:

CE: Calving Ease – A number that predicts the average difference in ease with which a sire's calves will be born when he is bred to first calf heifers – **higher numbers indicate greater calving-ease**.

BW: Birth Weight, WW: Weaning Weight & YW: Yearling Weight – All are expressed in pounds, this shows the expected number of pounds a bull or female will add or subtract from their progeny's birthweight, weaning weight and yearling weight respectively.

MK: Milk: expressed in pounds of weaning weight that a female will add/subtract or that a bull's daughters will have.

TM: Total Maternal - expresses the combination of what a sire transmits to his daughters in the form of genetics for growth and genetics for milking ability. Or that same trait directly applied to a female and expressed in pounds.

CEM: Calving Ease Maternal: this EPD predicts how well an animal's daughters will calve with a higher number being easier calving.

ST: Stayability: Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six year of age.

DOC: is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

CW: Carcass Weight: expressed in pounds of carcass weight adjusted to a constant fat endpoint.

REA: Rib Eye Area: expressed in square inches of rib eye muscle area adjusted to a constant fat endpoint.

MB: Marbling: expressed in degrees of marbling score, a determinant of USDA Quality Grade. Value is adjusted to a constant fat endpoint.

\$Cow: Represents the genetic value in dollars of profit of an animal when retained as a replacement female relative to other animals in the herd. A higher number represents more profitable genetics for maternal productivity.

FPI: An economic selection index designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold on grade and yield.

EPI: An economic selection index developed to aid producers in selecting for more feed efficient cattle that still have acceptable amounts of gain.

\$W: (Weaned Calf Value), (Angus only) an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size

\$F: (Feedlot Value) & \$G (Grid Value) (Angus only) are both an index value expressed in dollars per head, and are the expected average difference in future progeny performance for postweaning merit (\$F) and progeny performance for carcass grid (\$G) compared to progeny of other sires

\$B: (Beef Value), (Angus only) an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires

What you need to know about Residual Feed Intake (RFI)....

What is Residual Feed Intake or RFI? Residual Feed Intake or RFI is defined as the difference between an animal's actual feed intake and its expected feed requirements for maintenance and growth. RFI is the variation in feed intake that remains after the requirements for maintenance and growth have been met. Efficient animals eat less than expected and have a negative or low RFI, while less efficient animals eat more than expected and have a positive or high RFI.

How is RFI measured? To accurately measure RFI, you have to weigh and log an individual animal's feed consumption and compare that amount to the animal's expected intake over a standardized test period. The technology to do this accurately is available utilizing the GrowSafe feed system. The system has individual bunks that sit on weigh bars that are configured for only one animal to eat at a time. Feed is available free choice and every animal on test has an EID tag. When an animal's head enters the bunk, it passes a sensor that records that individual EID number and measures the amount of feed consumed by that individual. The sensors and weigh bars are taking second by second readings. This feed intake data is instantly transmitted wirelessly to a dedicated computer and stored in its database. All this data and individual animal information and weights are sent to GrowSafe Systems at for analysis and to compute an RFI score.

How is RFI reported? RFI is reported in numerical form plus or minus in pounds of feed. Each group is forced to have an average of zero. The RFI results can range from a minus 3.5 to a plus 3.5. Using this range there can be a difference of 7 pounds of feed consumed per day to achieve a comparable gain.

How important is RFI data? The economic relevance of RFI is significant. RFI is moderately heritable at .28-.44 comparable with other production traits. By selecting for feed efficiency various research documents an increase in carrying capacity of 10% or more and increased feedlot profitability of 10-15%. Imagine reducing feed costs by over 10% or running 10% more cattle on the same resources. However, selecting for RFI must be done as part of a balanced selection program as other traits such as disposition, calving ease, fertility, growth, milk and carcass also have significant economic relevance. Each producer or rancher must analyze their individual situations to determine what traits will be most beneficial to their bottom line.

How does Seedstock Plus factor in? Seedstock Plus has been RFI testing bulls since 2010. We embraced the importance of this data for our use as breeders and also to enhance the selection available to our customers. In the summer of 2013 we purchased and installed our own GrowSafe systems in MO and AZ. In the fall of 2015, we expanded the MO system. This will enable us to RFI test over 550 bulls and 200 females each year. Accelerating the amount of data generated to incorporate with all other data Seedstock Plus has been collecting such as DNA and ultrasound.

Reading the RFI test results.

Group: Denotes which group the bull was tested in. The RFI score of bulls from one group should not be compared to other groups as they are separate contemporary groups.

ADG: The average daily gain during the RFI test

ADG Ratio: Ratio with 100 being average, calculated per group for comparison.

RFI: the RFI value calculated from the bull's actual feed intake on test

RFI RANK: The RFI rank within each group with 1 being best.

RFI Rank is within each group

Bull Warranty Program

Insurance for your bull!

Several years ago, Seedstock Plus instituted an insurance program for new bull purchases in an effort to protect our customers from a catastrophic loss if something should happen to a bull within the first breeding season. This program covers any and all possible things that a bull can do to himself in the first six months of ownership. The warranty costs **5%** of the purchase price and should you have to use it, we try to either bring you a comparable replacement or find a suitable loaner bull to get the cows bred if you are still in the midst of breeding season. If something happens to him towards the end of the season, we still cover that but often will either take the bull back and issue a credit towards your next purchase or have you ship the bull, keep the salvage funds and issue a credit for the balance. Any way you look at it - we get you back even! We've warrantied bulls that have been hit by lightning, hit by trains, drowned, broken various body parts or been injured in such a way that he won't ever be sound to breed cows again.

There are very few affordable commercial insurance policies that will cover a bull for loss of use. Farm policies will cover ‘acts of God’ (so do we!) but again, an injury is just your tough luck. The **5%** of purchase price cost is a small price if something happens to your bull within that first 6 months!

We appreciate the fact that you've put your trust in us to present you with a bull that has a good disposition, good feet and legs and will breed cows - we feel those things should be 'on us' and you don't need insurance if you have a problem in one of these areas - you just need to let us know and we'll take care of it. We try to catch every possible problem prior to the sale but things happen and bulls are bulls.... But if your bull gets injured or dies, he needs to be insured! Take a good look at what the warranty can offer you and be sure to tell us at the settlement table that you want to insure your bull!

About Balancer[®] Bulls

The Profitable Blend of Angus and Gelbvieh Genetics!

Balancer hybrids offer a simple and powerful way to maintain hybrid vigor and the proper blend of British and Continental genetics in your cowherd without complicated crossbreeding systems. Registered Balancer hybrids combine the Angus advantages of calving ease, moderate mature size, marbling and convenience traits with Gelbvieh growth, muscle leanness, fertility and unequaled pounds of calf per cow exposed in a single animal. And, documented research proves that Balancer hybrids offer the same consistency as their purebred parents with improved uniformity of composition. Plus, Balancers are registered seedstock, complete with documented parentage and EPD's. Balancer bulls are registered as Gelbvieh and Angus or Red Angus hybrids with a minimum of 75% of the pedigree documented and with both the sire and the dam recorded with their respective association. There are also registered Hybrid bulls in this category, the difference being a varying percentage of Gelbvieh as well as a mixture of other breeds. These bulls can be used in a similar way as the Balancer bulls as long as the buyer is aware of the actual breed makeup as close as can be known.

Both the Balancer & Hybrid bulls' EPD's are figured on the Gelbvieh base and can be compared to the Gelbvieh bulls.

The average EPD's for Balancer bulls as of 1/14/2020 are:

Seedstock Plus is proud to once again be listed in the top 100 in bull sales by BEEF Magazine. Ranking # 16 on the list with over 900 bulls sold in the 2019 calendar year! We know bulls and we can certainly help you find one that is right for your program! Contact us if you need help in matching a bull to your needs!

Terms & Conditions

Terms: Terms of the sale are cash or personal check unless satisfactory credit arrangements have been made with the seller previous to the sale.

Bidding: All animals sell to the highest bidder. Any disputes or challenges regarding bids shall be settled by the auctioneer and his decision shall be final. Mailed or telephoned bids will be handled with the strictest confidence.

Registrations & Transfers: Each animal which is offered and sold has a certificate of registry available at the time of sale. The seller is responsible for the proper transfer of the certificate to the purchaser including full payment of transfer fees.

Purchaser's Risk: Each animal becomes the property of and therefore is also the risk of the purchaser as soon as it is sold.

Announcements: Any errors or changes in information contained in the catalog will be announced from the auction block. Such announcements shall take precedence over information contained herein.

Rights and Obligations: The above terms and conditions of sale constitute a contract between the buyer and seller of each animal and shall be equally binding to both. Animals resold following purchase in this sale shall constitute a separate transaction and the rights and obligations of the parties connected thereto are not covered by the above terms and conditions of this sale. Neither the host farm, auctioneers, nor any other person connected with the management or conduct of this sale assumes any liability, legal or otherwise, except as set forth above.

DEFINITIONS AND GUARANTEES

HORNED: An animal with a horn growth affixed to the skull that has or has not been removed.

POLLED/SCURRED: An animal with rudimentary horn growth that will not develop into a horn. The rudimentary horn growth may or may not become affixed to the skull at an older age.

POLLED: An animal with absence of horn growth (An animal can have scurs and still be genetically polled)

DOUBLE POLLED: An animal whose sire and dam are both polled or scurred, this gives this animal the possibility of being homozygous polled for the polled trait but it is not yet proven so.

HOMOZYGOUS POLLED: An animal who carries two polled genes, and will produce polled or polled/scurred offspring with every mating.

DILUTER GENE: A gene carried by some Gelbvieh cattle that affects the degree of red color in the hair coat. Bulls carrying this gene can produce gray calves when mated to black cows or cream colored calves when mated to each other.

DILUTER FREE: All Red Angus are free of the diluter gene as are all red Gelbvieh cattle resulting from a double black mating. Red Gelbviehs can also be proven diluter-free by mating to black cows and producing all red or black offspring

DOUBLE BLACK: An animal whose sire and dam are both black, which give the animal the possibility of being homozygous for the black trait but its not yet proven so.

HOMOZYGOUS BLACK: An animal who carries two black genes and has been proven by mating or genetically tested to produce black or black factor (gray when mated with diluter-based genetics) calves with every mating.

For more information contact: Seedstock Plus Toll Free at: 877-486-1160 or John on his cell: 660-734-1165 or visit the website: www.seedstockplus.com
